510510	Rough Grade	8/19/2015	🗨️	Acme Grading, LLC

COLLABORATION • EFFICIENCY • PROFITS

Do you know **FieldCollaborate** includes a *web-based Portal* for vendors and homebuyers? You can say good-bye to vendor dry runs, homeowner calls asking for construction status and sorting through multiple reports to find stage-of-construction results.

Portals provide authorized users with the ability to view (and sometimes update) information developed by a variety of different systems and used by different organizations.

What can **FieldCollaborate Portal** do for a homebuilder, their vendors and homebuyers? The key concept is all of the "stakeholders" are able to share information in *real-time, anywhere/anytime*. In the office? Use your desktop. Out on the job-site? Any Android or Apple smartphone or tablet will do.

What can be viewed? In this feature, we're focusing on construction schedules. Vendors can log-in and view upcoming schedules by community, lot and date. No more miscommunication, field manager emails and phone calls or vendor dry runs. Your vendors are happier and more profitable!

Builders can also offer truncated schedule views to their homeowners – along with stage-of-construction photos. Keeping your buyers informed and up-to-date pays off in reduced calls and visits during the construction process, as well as *satisfied buyers* making referrals after the close.

What's more inefficient and organizationally disruptive than multiple reports providing different answers to a question? The Portal provides a *single source of information* and it's available anywhere/anytime.

Portal use will reduce costs due to inefficiency for both builders and vendors. And, it provides enhanced communication opportunities for homebuyers.
